### Data Qualifiers

- The data in this report does not infer the complexity of an investigation or the outcome. Data in this report is based on a search of the Police Records and Information Management Environment (PRIME). Data may change over time due to the dynamic nature of offences being reported, clarified, cleared, and categorized.
- The complexity of a criminal investigation and amount of resources required to investigate an incident is not reflected in the data. For example, a property crime investigation may be concluded after initial information gathering due to the lack of evidence required to proceed further, while another property crime investigation may require numerous judicial authorizations that spans months to accumulate evidence, prepare a report to Crown Counsel, and comply with disclosure requirements.
- Most serious incident rule: The crime data contained within this report utilizes the Uniform Crime Reporting (UCR) Survey to collect aggregate data on the incidence of crime. The UCR survey uses the most serious incident rule when compiling police-reported crime data. The rule also stipulates that where a single criminal incident contains a number of violations of the law, then only the most serious one is reported for UCR purposes. As a result, the total number of UCR offences does not represent the total number of all crime reported by police.
- Total criminal offences include UCR codes 1000 to 5999 (persons, property and other offences), 9000 to 9999 (criminal driving offences)
- Calls for service include 911 calls, non-emergency, front counter reports, and files generated by officers on the road. Traffic tickets are not recorded as calls for service unless it was the result of a report from the public or the interaction had a more substantial offence associated to it, such as impaired driving or prohibited driving.
- Break and enter occurrences, both residential and business, are manually reviewed to provide greater context to the nature of the incident. The UCR statistics reported to the Canadian Centre of Justice Statistics may appear different as it does not differentiate between the different types of business break and enters.
- To protect privacy, the number of sexual offences each quarter will only be reported by actual number if 5 or more incidents are reported. The report will otherwise state *under 5 sexual offences reported*.
